

Release Notes for Broadband Policy Manager Release 1.6

This document contains information that does not appear in the Broadband Policy Manager (BPM™), Release 1.6, documentation. It includes the following topics:

- [New Features](#), page 2
- [Resolved Issues](#), page 3
- [Known Issues](#), page 4
- [Known Defects](#), page 7
- [Documentation Changes](#), page 8

New Features

None.

Resolved Issues

None.

Known Issues

This section describes issues known in this release.

Ticket 1885 - No mention of SCE.

Issue

Latest Doc build (39838) that accompanies app 39895 has no mention of the SCE. Core 2.1.0.3 with App 39895 is primarily introducing the Cisco SCE (previously PCube) into the App. There are now several more TZZ packages for the SCE that need to be installed. These need to be included in the Customer Installation Instructions, as well as an overview of the SCE & what its purpose is.

Resolution:

Chapter 4 of the *Cisco Broadband Policy Manager Software Installation and Configuration Guide* has been rewritten. See the section, Documentation Changes, below.

Ticket 1888 - SCE documentation in wrong manual.

Issue

The Service Control Engine chapter is currently in the Admission Control Manager Guide, but use of the SCE is not related to ACM, it's related to SM/NM. The chapter should be moved to the IP Service Manager Guide.

Resolution:

Chapter 5, covering the Service Control Engine (SCE) is now Chapter 5 in the *Cisco Broadband IP Services Module User Guide*. See the section, Documentation Changes, below.

Ticket 1906 - Updates needed to the BPM configuration and installation guide.

Issue

Updates need to be made to the guide for various reasons including addition of SCE functionality.

Resolution:

Chapter 4 of the *Cisco Broadband Policy Manager Software Installation and Configuration Guide* has been rewritten. See the section, Documentation Changes, below. See the section, Documentation Changes, below.

Known Defects

None known.

Documentation Changes

The changes below apply to the documentation set for BPM Release 1.6.

Cisco Broadband IP Service Module User Guide

Chapter 5 - Service Creation Engine, erroneously included in the Cisco Capacity Admission Manager is now Chapter 5 of the Cisco Broadband IP Service Module User Guide. (Ticket 1885; Ticket 1888.)

Cisco Broadband Policy Manager Software Installation and Configuration Guide

The following documents are now included with the guide. (Ticket 1906).

Chapter 4 - Installation

The attached document, Chapter 4, Software Installation, replaces Chapter 4 of the guide.

Appendix C - Network Management Provisioning File

The attached document, Appendix C, Network Management Provisioning File, is appended to the guide. This file is used when installing the Network Manager (NM) or Session Manager (SM) products.

Appendix D - Service Control Engine Provisioning File

The attached document, Appendix D, Service Control Engine Provisioning File, is appended to the guide. It includes a discussion of the XML file that is necessary to configure an SCE device.
